**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshino et al [6677093] in view of Matsumura et al [5155000] and Blair et al [6534230]. Applicants' arguments have been carefully considered but deemed not persuasive in view of the new references. The use of titanium oxide as an additive to a toner is known. Such additives are to improve the physical properties of the toner. The black of a toner can be a result of non carbon black I.e. Nigrosine, Amaplast black or a metal oxide and all can improve flow by the addition of a titanium oxide. The use of titanium oxide as a colorant is not taught. Note applicants' page 3 line 5. Yoshino et al teaches a metal oxide as a black toner in an amount up to 29% note Col. 9& 10. Matsumura et al teaches the use in toner of titanium oxide with a black nigrosine or amaplast black note Col.5 lines 15-30. The titanium as a surface additive is taught in Blair et al. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to use the surface additive to improve the flow properties of the toner and to have a metal oxide as the black colorant of the toner to improve the high volume specific resistance value of the toner.
